

## BUILD YOUR OWN L SCREEN

### What you need?

- 25 feet of plumbing pipe (2" width inside)
- 2 T Joint's
- 2 Straight Y's (or double Y's so you can turn the screen around)
- 5 Elbows
- Strong hockey mesh, batting cage or golf mesh
- 1 Jar of Pipe Glue

### Directions:

Cut the pipe into the lengths directed above. Glue the pieces into the adjoining joints and slowly make the sides, top and bottom. Once the frame is complete there should be enough pipe to create leg stands for both sides of the L-Screen. This will allow the screen to be switched around for a left handed thrower. The mesh can be wrapped over top and fastened using a variety of materials ... string, rope or tape.
